- Prepares project charter, statements of work and project plans.
- Identifies risks and prepares action plans to mitigate.
- Conducts or leads team in delivery of projects or work packages.
- Liaises and co-ordinates with internal & external groups on accomplishment of deliverables.
- Prepares and presents status report and variance explanation for projects or work packages.
- Prepares findings & "Lessons Learned" from post-implementation project reviews.
- Assesses, analyzes, evaluates and recommends process & policy alternatives for projects & work packages.
- Redesigns business principles, processes, policies and standards by recommending best practices and improvements to current processes.
- Determines business requirements and builds consensus amongst clients.
- Prepares Business Plans, Gap Analysis, Logical Data Models and Design documents for proposed solutions that leverage information & technology as part of the solution.
- Provides input to Data Management teams on transformation of clients' business requirements.
- Recommends improvements to current methodology, process, standards, and policies.
- Assists staff in understanding of business processes and logic.
- Liaises with staff in development of test strategy, test cases & test scripts for system, performance, usability and acceptance testing of system solutions developed.
- Leads team to draft implementation & rollout strategies and plans.
- Conducts walk-through of deliverables to identify potential problems.
- Prepares training material and documentation for use by clients and staff.
- Conducts training for client and their staff.
- Collaborates with clients on "Go / No Go" cut-over decisions e.g. roll-outs.

Key Qualifications:

Your application for the role of **Systems Integrator 1** should describe your qualifications as they relate to:

1. Post-secondary education in Computer Science or a related discipline with considerable experience in large-scale IT solutions, or the approved equivalent combination of education and/or experience.
2. Extensive experience coding PL/SQL, Oracle RDBMS especially 19c or higher.
3. Considerable experience in data extraction, transformation, analysis and reporting.
4. Considerable experience in system analysis, requirement analysis, application design, coding and testing, troubleshooting, production deployment and application support.
5. Experience in at least two of the following or equivalent technologies such as Java, Java EE, REST API, Oracle Application Express, PowerBuilder, Software Version Control (e.g. GitHub) and business intelligence (e.g., Jasper report) will be an asset.

You must also have:

- Excellent verbal and written communication, problem-solving, leadership, facilitation and interpersonal skills.
- Strong customer service orientation along with a demonstrated ability to establish and maintain effective stakeholder relationships.
- Ability to work effectively as a team member, collaboratively in a multidisciplinary team environment and independently, as required.
- Advanced time management and estimation capabilities, and ability to perform several tasks and projects concurrently.
- Knowledge of current and emerging technologies and skills to evaluate and recommend new technology for introduction into a complex technical environment.
- Ability to develop, maintain and execute both test plans and disaster recovery plans.
- Ability to work flexible hours including days, afternoons, nights and weekends, as required.
- Ability to be on call for support of production systems, as required.
- Ability to travel across various office locations within the City of Toronto, as required.

NOTE TO INTERNAL FULL-TIME AND PART-TIME CITY OF TORONTO EMPLOYEES:

City of Toronto employees must apply to full-time or part-time employment opportunities posted on the City's **Internal** Job Posting Portal.

Equity, Diversity and Inclusion
